

Hands on Resin Casting Clinic --- Resin Casting 101 --- Parts 1 & 2

Requirements:

Two 2-3 hour clinic sessions;
Limit of 15 participants;
Cost \$10 each participant;
Work tables, a computer projector & screen.

Description: A hands-on, make & take away resin casting clinic.

Ok, you wanted to try resin casting, but haven't gotten around to it, or maybe have been put off the initial cost/investment to just get started. Here's your chance to test this all out to see if it's something that you want to learn and try to do, and get started buying everything needed to routinely do resin casting.

This is a 2 part clinic!

The 1st part – **Making your Mold** - will be given on one day with the 2nd part – Using your Mold – will be given at the 2nd session.

The 1st part to be held on January 21, 2023, consists of a Powerpoint overview presentation for all attendees. Thereafter, each attendee will proceed through to preparation of an RTV mold of a master. Participants may use their own master providing it fits in the bottom of a 12 oz paper cup with at least a ¼” clearance around it, be not taller than ½”, have a totally flat back surface, and is their own work. If needed, some suitable object as a master will be provided.

We will go through all of the steps to set up a mold for pouring RTV, mix and pour the RTV. By the end of the session, attendees will have a poured mold that will be used for pouring resin in the 2nd session. The mold needs ~18 hours to fully cure.

The 2nd part to be held on February 25, 2023, consists of freeing the mold from its container and demolding the master from the RTV mold. Then attendees will use their molds to gain some experience in mixing and pouring resin, and then extraction of resin castings from their molds. This session will focus of mixing and pouring resin – everyone will get several opportunities to use their molds.

All materials will be provided. Any questions, contact Martin Brechbiel, MMR:
