

6. Ken Nesper's Bridge at Port Shepherd

This through truss bridge is carrying a Capital Transit PCC car across Post Shepherd. Below the bridge, B&O 9416, an EMD SW-900, is working the Port Shepherd Yard. Fictional Port Shepherd is at the south end of the B&O's Shepherd Branch in SE Washington. The actual purpose of the bridge is to obscure the view of the switch lead going through the backdrop. This is an O scale 2 rail (OS2R) standard gauge model railroad. The bridge is from Lionel; the PCC car is by Corgi; and the locomotive is an AtlasO product which I painted and decaled. ***Ken Nesper***
