

## 1. Martin Brechbiel's Pickle Car

This is a scratchbuilt, smaller early pickle car in O scale that features board-by-board construction with styrene shapes, lots of nut-bolt-washers, and a basic K brake underbody with all the truss rods. Assembly with commercial products was limited to a brake casting, brake wheel, ratchet & pawl, queen posts, and four grab irons. It's my favorite since it's the most recent car I've built (last week of July '21) and it goes with the large Lauthers Perfect Pickles building on my layout. **Martin Brechbiel, MMR**
