

2. Alex Belida's Water Tower

This was a Bar Mills kit for the Water Tower at Cranberry Yard in HO scale. The base structure, the tank and the roof were cast pieces that had to be painted and weathered and the wooden pieces stained before assembly. The spout assembly was the hardest part as thread had to be slipped through tiny holes in the pulleys and eye hooks. Next up on my project list will be the Scale Model Masterpieces Ramshackle, Backwoods Engine House. It and the water tower will be planted up by my sawmill to service the lumber spur.
Alex Belida, MMR
