

## 14. LEE STOERMER'S SIGNS & LOGO

The signs were captured from various internet sources. The proprietor named on the store memorializes a great model railroading friend who passed a few years ago. This model is a Grandt line Gomez store kit that he had built for his layout and I wound up with it. It did not survive relocation well as the glue joints failed but it was not critically damaged. It was repaired, repainted, weathered, and detailed. All signs were digitally manipulated for size, printed, and applied, and are now prominently featured on my Northern Central Railroad layout.

One more done by AI manipulation. It started with a logo from a vintage railroad lock (left) of the railroad that is my prototype.  
*Lee Stoermer*
