

1. JEFF LODGE'S PAPER DECAL

This is a handmade paper “decal” created by drawing the image twice its final size, taking a 50Mpx image with a camera, then fine tuning the lines and colors in the computer. The image was printed on quality paper with a professional ten ink Edson printer. Finally the image side of the paper was treated with a protective UV varnish and then the backside of the paper was carefully sanded very thin and applied to the scratch built structure. *Jeff Lodge*
