

## 9. Anonymous Flatcars with Loads

This pair of Athearn flatcars have custom installed loads of construction equipment.

Both of these cars are Roundhouse/MDC with custom made steel beam loads.

The ACL bulkhead flat and load are by Atlas, significantly worked to weather the car and load. The WM flat and load are a Proto2000 product on its inaugural run.

The IC has a home made 'tarped' loads on an Atlas bulkhead flat.

The T&NO bulkhead flat is by Atlas with a cast resin load by Chooch, the SP flat is by Athearn with a scratch built lumber load.

Unsure of the manufacturer of the bulkhead flat car. The tube load is custom built.
