

3. Deane Mellander's 4-4-0

I've always had a "thing" for 4-4-0's so I decided to build one in HO. The boiler, cab and cylinder block are Kemtron parts that were marketed as the Wabash Mogul. All those parts were soldered per the instructions from Kemtron. The drive is actually the back two-thirds of a Varney Casey Jones 4-6-0. I built a frame extension for the pilot, and the pilot truck is from a Mantua General. The tender came from an Akane Ma and Pa 2-8-0. It actually still runs, but I don't think it will get DCC. *Deane Mellander, MMR*
